Mr. A. T. Ganesan
B-12 Library Road
New Delhi
INDIA

Dear Gan:

I am sorry to have let this slip for so long, but I have gotten in touch with Dr. Littauer here who comes from the Biochemistry Department at the Weizmann Institute. He is quite sure that you will receive a definite invitation to visit that department during your time in Israel, but just in case it does not reach you in New Delhi in time, I suggest that you get in touch with Dr. David Elson, also in the Biochemistry Department.

I may have time to think further of some other connections to establish at the Weizmann Institute - If you can get hold of a copy of their list of publications which they do send out yearly you may be able to get a good idea yourself whom else it will be worthwhile to look for. I would ask that you find, if you can, if Katchalski has done any further work on the catalytic activities of synthetic polypeptides. I have also noticed just the title of a paper by Shavit "On an electric field effect in polymerization" and am rather puzzled as to the implication of it.

Please give my best regards to the biologists we know there, including Leo Sachs, Heller and Yaffe.

I hope you have a good time there.

All is going well here now. Haruko, unfortunately, will definitely leave at the end of the summer, but I think we should be able to find someone to take her place before she goes.

Sincerely,

Handwritten signature
